PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/661,471	Applicant(s) HANCOCK ET AL.	
	Examiner MAURY AUDET	Art Unit 1654	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2007.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 89-98 and 101-130 is/are pending in the application.
- 4a) Of the above claim(s) 89-92, 94-98 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 93, 105 and 108-130 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12 September 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1654

DETAILED ACTION

As noted previously, the present application has been transferred from former Examiner Young to the present Examiner.

Applicant's response is acknowledged and has overcome the rejections under 35 USC 112 2nd. However, the same issue remains under 35 USC 112 1st. Applicant's arguments have been considered, but are not found persuasive in view of new art of record. For this reason the rejection has been amended, and the present action is being sent Non-Final.

Election/Restrictions

As noted previously, Applicant's election with traverse of Group V, claim 93 and 99-110, as drawn to the elected peptide of SEQ ID NO: 7, in the reply filed on 1/9/07 is acknowledged. The traversal is on the ground(s) that it would not be an undue burden to search other peptide sequences of the invention, e.g. SEQ ID NOS: 5-6, 8-10, and 13-17, since a search of some of these sequences would necessarily "reveal" art relevant to the sequences. This is not found persuasive for the reasons of record (see e.g. a comparison of 14 mer SEQ ID NO: 6 and 13 mer elected SEQ ID NO: 7, wherein no more than 3mer core is found identical). Additionally, Applicant has not supported the previous statement of record, that any art "revealed" would necessarily render obvious any of the other peptides beyond that of elected SEQ ID NO: 7. "Revealing" potential art and searching an actual distinct peptide structure as to whether "real" art exists on that peptide are two different things. Thus, a search of these distinct peptides must turn on a peptide by peptide analysis, there being no substantial core structure therebetween.

Art Unit: 1654

Claims 89-92 and 94-98 are withdrawn as being drawn to non-elected subject matter.

Claims 93 and 99-110 are examined on the merits as drawn to the elected peptide of SEQ ID

NO: 7.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112 1st Enablement

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 93, 105, 108-130 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Namely, peptide SEQ ID NO: 7 has not been shown to stimulate innate immunity within the immune system (the claimed invention), alone and absent the antibiotic or granulocyte-macrophage colony stimulating factor (GM-CSF), respectively it is administered in combination with – the latter already being known to carry out their functions respectively.

The first paragraph of 35 U.S.C. 112 states, “The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same...”. The courts have interpreted this to mean that the specification must enable one skilled in the art to make and use the invention without undue experimentation. The courts have further interpreted undue experimentation as requiring “ingenuity beyond that to be expected of one of ordinary skill in the art” (Fields v. Conover, 170 USPQ 276 (CCPA 1971)) or requiring an extended period of experimentation in the absence of sufficient direction or guidance (In re Colianni, 195 USPQ 150 (CCPA 1977)). Additionally, the

Art Unit: 1654

courts have determined that "... where a statement is, on its face, contrary to generally accepted scientific principles", a rejection for failure to teach how to make and/or use is proper (*In re Marzocchi*, 169 USPQ 367 (CCPA 1971)). Factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. 112, first paragraph, have been described in *In re Colianni*, 195 USPQ 150, 153 (CCPA 1977), have been clarified by the Board of Patent Appeals and Interferences in *Ex parte Forman*, 230 USPQ 546 (BPAI 1986), and are summarized in *In re Wands* (858 F2d 731, 737, 8 USPQ2d 1400, 1404 (Fed Cir. 1988)). Among the factors are the nature of the invention, the state of the prior art, the predictability or lack thereof in the art, the amount of direction or guidance present, the presence or absence of working examples, the breadth of the claims, and the quantity of experimentation needed.

The instant disclosure fails to meet the enablement requirement for the use of peptide

SEQ ID NO: 7 has not been shown to stimulate innate immunity.

The nature of the invention: The invention is drawn to the combination of antibiotics or granulocyte-macrophage colony stimulating factor (GM-CSF) with peptide SEQ ID NO: 7, to stimulate innate immunity.

The state of the prior art and the predictability or lack thereof in the art:

Khan et al. (2002/0064501) teach that "[b]y way of example and not wishing to bound to theory, we propose that one of the mechanisms of immunoregulating peptide to modulate the immune response during pregnancy is the following: some IR factors during pregnancy can ensure that if T cells are activated, there is a bias to a Th2 response" (para 126). Thus, the ability of peptide to actually stimulate innate immunity is deemed theoretical.

And as noted previously, there is no prior art of record showing that the artificial 13mer peptide SEQ ID NO: 7, can function to carry out 'stimulation of innate immunity'.

The amount of direction or guidance present and the presence or absence of working examples: Enablement must be provided by the specification unless it is well known in the art.

In re Buchner 18 USPQ 2d 1331 (Fed. Cir. 1991). Specification para 177 describes that:

Art Unit: 1654

“Experiments were carried out with peptide and sub-optimal Cefepime given 6 hours after the onset of systemic *S. aureus* infection (FIG. 1). The data in FIG. 1 is presented as the mean.+- standard error of viable counts from blood taken from the mice 24 hrs after the onset of infection. The combination of sub optimal antibiotic (cefepime) dosing and SEQ ID NO: 7 resulted in improved therapeutic efficacy. The ability of the peptides to work in combination with sub-optimal concentrations of an antibiotic in a murine infection model is an important finding. It suggests the potential for extending the life of antibiotics in the clinic and reducing incidence of antibiotic resistance.” There is no discussion of SEQ ID NO: 7 alone or its ability to stimulate innate immunity. Only a conclusion that SEQ ID NO: 7 works in synergy with Cefepime to improve *S. aureus* infection. And further conclude that SEQ ID NO: 7 must somehow “stimulate innate immunity”, the claimed invention. At the present time, the above is deemed inconclusive evidence that SEQ ID NO: 7 works in any other way than that of a carrier alongside the combination with an antibiotic or GM-CSF, to either treat infection on the first front or stimulate innate immunity on the latter (or render anti-inflammatory or anti-sepsis properties alone as in the claims), which those compounds are known to do alone.

The breadth of the claims and the quantity of experimentation needed: The claims are drawn broadly to the use of a peptide of SEQ ID NO: 7 to “stimulate innate immunity”. There were no tests found conducted alone to substantiate the enablement of SEQ ID NO: 7 to carry out these functions, relevant to an infection or otherwise. As Khan teaches, the ability of peptides to stimulate innate immunity is purely hypothetical or theoretical at this stage. Absent further evidence (e.g. to something the Examiner overlooked in the specification or via 132 Declaration) there is insufficient teachings in the specification or art sufficient to overcome the

Art Unit: 1654

teachings of unpredictability in the art as to enablement; it would require undue experimentation by one of skill in the art to be able to practice the invention commensurate in scope with the claims.

Observation

Notwithstanding the outstanding rejection, the present invention, a combination with a peptide, wherein said peptide is SEQ ID NO: 7, was not found to be reasonably taught or suggested by the prior art of record.

Conclusion

No claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MAURY AUDET whose telephone number is (571)272-0960. The examiner can normally be reached on M-Th. 7AM-5:30PM (10 Hrs.).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cecilia Tsang can be reached on 571-272-0562. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
